

ABSTRACT OF THE DISCLOSURE

The aerosol foam product for hair treatment includes a pressure-resistant container and a foamable composition filled in the pressure-resistant container together with a propellant. The foamable composition contains a dialkyldiallyl ammonium chloride/acrylamide copolymer; another copolymer, formed from a first monomer, which is an alkyl acrylate or alkylmethacrylate, and a second monomer, which is acrylic acid or methacrylic acid; at least one base for at least partial or total neutralization of the another copolymer and a suitable solvent system.
